

CONSENT FORM

The aim of this project is find the association people make between the severity of a warning while browsing the web, and temperatures as well as vibrations. I will start by going over the meaning of the different security warnings you will see. Then, you will be asked to set your hand on the thermal device. During the experiment, you will be shown different security warnings in different contexts and asked to select the temperature which you would associate with the warning. The thermal device will heat or cool to the temperature you select. The device can only be set from 22°C to 38°C, to ensure your safety. You will also be asked to select a vibration pattern which, once again, you associate with the warning on the screen.

I have been explained the basics of the experiment.

YES

NO

I am aware this evaluation involves thermal feedback, and have been explained how to use the device safely.

YES

NO

I have been given the opportunity to ask questions and have had them answered to my satisfaction.

YES

NO

I am over 18.

YES

NO

I agree to take part in this project.

YES

NO

I understand that my participation is voluntary and that I am free to withdraw at any time without giving a reason.

YES

NO

I consent to audio recording being made of this session.
